STATEMENT OF RELEVANCY

**Reference AO (JP 10-308722) on Form 1449:**

A radio base station temporarily dividedly stores the packets sent from a server into two buffers. When both buffers store the packets, the buffers send the stored packets to a transmission part. Thus, the signal transmission speed can be accelerated. But the interference can't be suppressed.

**Reference AQ (JP 10-23041 corr. to EP 793368) on Form 1449:**

Packets of data are broken into packet-slots. Transmit-start times and durations of packet slots are controlled by packet-slot distribution patterns. So a receiving device needs packet-slot distribution patterns. (English title: "Technique for minimizing the variance of interference in packetized interference-limited wireless communication systems").
